

**Had enough of laughably poor interest rates on your savings and low returns on shares?**

**Concerned that your pension pot might not be up to the task when you come to retire?**

**Looking for a tax-free investment that offers you high returns and some pleasure out of life along the way?**

Highly respected local accountant Frauke Golding, who created Woodsdale Property as a highly tax-efficient investment vehicle for her own and her family's savings, might just have the answer.

**"I invested in Woodsdale Property because, firstly to have the opportunity to own several properties overseas without having to pay any annual charges. I can tell my friends I have holiday homes without the costs involved. Secondly, I trust Frauke's recommendations & advice. In addition, Frauke has not come back to me and asked for any more money."**

The success of this investment opportunity is based on two key essentials:

1. The ingenious way the company is structured to **legally avoid tax on profits paid to its investors**
2. The **rigorous research** that goes into scrutinising every investment property location

As you would expect from an opportunity structured by an experienced accountant, this investment offers a very low risk factor, and potentially very high returns.

Frauke's in-depth knowledge of tax regulations and company structures has enabled her to put together an outstanding investment opportunity that allows shareholders in the company to own stakes in multiple foreign properties in stunning locations.

Investors in the company enjoy not only the use of the investment properties at low, special investor-only prices, but also tax-free profits with a very low risk level.

**"I had some money available to invest and liked the idea of a share in property in Turkey. I knew it was a developing market, my wife and I could holiday there at reduced cost and properties were to be bought entirely with shareholders funds who own the properties outright and would not be in hoc to banks or mortgage companies. I felt safe with this concept.**

**I had known Frauke both as a successful accountant and financial controller of a local engineering company. I knew she had been instrumental in them being awarded an Industry of the Year award and I felt confident that what she proposed would be safe and well thought out.**

**I would recommend others to invest if they have the funds to do so. They will get to know the company management personally, costs are very low and personally I think in the current low state of the market it is a safe and effective way to get a foothold in the property market before the economic recovery begins as it surely will."**
